

NMSU Department of Theatre Arts
High Desert High School Theatre Festival
Lighting Summary

General:

The performance space is downstage of the black traveler and is 37'0" wide by 17'0 US to DS. There are 10 areas of lighting you may use (shown above). Each area has a front light, a side light from right and from left, an LED topl and two gobos. Finally, there are also 2 follow spot lights (student-operated).

Specifics:

Front Light is divided into areas 1-10 (Channels 1-10). These are R60 no color blue.

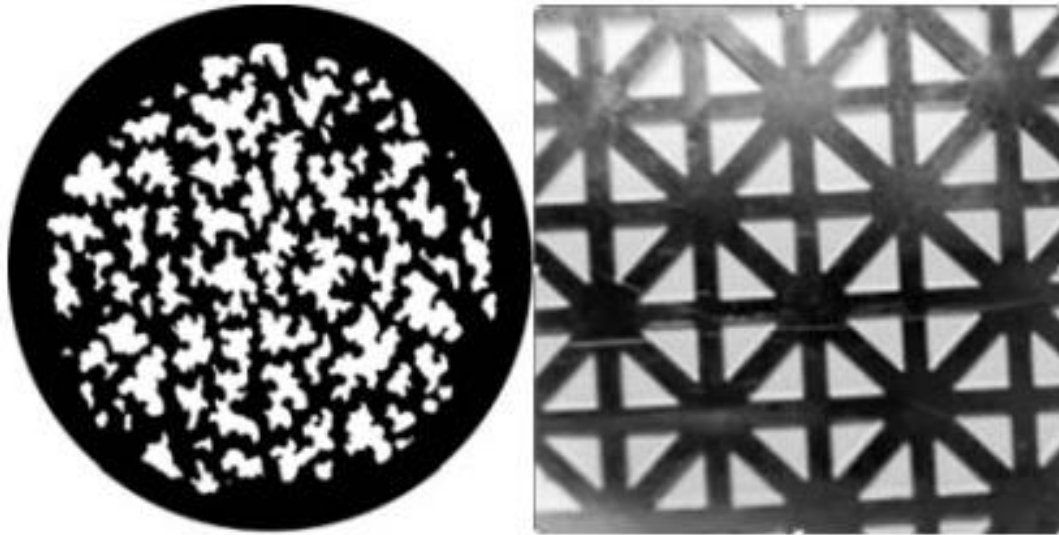

Top Light is divided into areas 1-10 (channels 11-20) and uses ETC D40 LED fixtures – this should allow for any color you desire

Side Light from R (SL) is R16 light amber, one for each area (channels 21-30)

Side Light from L (SR) is R64 – light steel blue, one for each area (channels 31-40)

Gobo wash 1 is TOPL on each area and is a geometric gobo – color is No Color (channels 41-50)

Gobo wash 2 is TOPL on each area and is a leaf breakup gobo – color is No Color (channels 51-60)

Followspots-There are two. These must be operated by your own students, who will be unable to perform other duties during the performance. In addition, you may use one special from Front of House.
